

URO428X

WiFi AP Profesional 2 Externas 350mW IP67 CP950

Características

WairLink professional access point. It has two N connectors for external antennas. PoE feed. Two radios with 600 mW of power. 5GHz frequency. IP67 metal box. Ideal equipment to use as a base station in point-to-point or multi-point installations of long range and medium speed or as a high capacity signal repeater point. WPA-AES security, MAC registration, firewall, extended channels and others. Operating temperature range from -20 to + 70°C. WairLink devices are characterized by their good performance in extreme conditions and their very low annual failure rate. They are teams that work in free bands. They work with channels of 5, 10, 20 and 40 Mhz, and that is why they resist interference very well and can offer real speeds per antenna of up to 90 Mbps. In security matters they have all kinds of encryptions, including IPSEC, and allow VPN links. They can be managed remotely through SNMP, SSH, Telnet, Web or through custom applications.
