

# CE EMC TEST REPORT

Report No.: RPA-16JY0025VNTY-66  
MODEL NO.: DH-SD6Cxyzuv-Hab, SD6Cxyzuv-Hab,  
DH-SD64xyzuv-Hab, SD64xyzuv-Hab  
(X=1-9 or blank; y=0-9; z=0-9; u=A-Z or blank; v= N,P  
or blank; a= C,N,S or blank;b=l or blank )  
Received: Mar 14, 2016  
ISSUED: Mar 26, 2016

Applicant: Zhejiang Dahua Vision Technology Co., Ltd.  
Address: No.1199, Bin'an road, Binjiang District, Hangzhou,  
P.R.China.

Issued By: BUREAU VERITAS ADT (Shanghai) Corporation  
Lab Location: 2F, Building C, No.1618, Yishan Rd., 201103, Shanghai, China

This test report consists of 90 pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product certification, approval, or endorsement by A2LA, CNAS, or any government agency. The test results in the report only apply to the tested item. The test results in this report are traceable to the national or international standards.

## 1. TEST PROGRAM

**PRODUCT:** 6 INCH IR SPEED DOME  
**MODEL NO.:** DH-SD6Cxyzuv-Hab, SD6Cxyzuv-Hab,  
DH-SD64xyzuv-Hab, SD64xyzuv-Hab  
(X=1-9 or blank; y=0-9; z=0-9; u=A-Z or blank; v= N,P  
or blank; a= C,N,S or blank;b=I or blank )  
**APPLICANT:** Zhejiang Dahua Vision Technology Co., Ltd.  
**TESTED:** Mar 20, 2016  
**STANDARDS:** EN 55032: 2012+AC:2013 (Class B)  
EN 61000-6-3: 2007+A1:2011  
EN 50130-4: 2011  
EN 61000-3-2: 2014  
EN 61000-3-3: 2013  
EN 55024: 2010  
IEC 61000-4-2: 2008  
IEC 61000-4-3: 2006+A1: 2007+A2: 2010  
IEC 61000-4-4: 2012  
IEC 61000-4-5: 2014  
IEC 61000-4-6: 2013  
IEC 61000-4-8: 2009  
IEC 61000-4-11: 2004

We, BUREAU VERITAS ADT (Shanghai) Corporation, declare that the equipment above has been tested in Cerpass Technology Corp., and found compliance with the requirement limits of applicable standards. The test record, data evaluation and Equipment Under Test (EUT) configurations represented herein are true and accurate under the standards herein specified.

## 2. Summary of Test Procedure and Test Results

EMISSION[EN55032: 2012+AC:2013 / EN 61000-6-3: 2007/A1:2011]		
Test Item	Normative References	Test Result
Conducted Emission	EN55032: 2012+AC:2013 EN 61000-6-3: 2007/A1:2011	PASS
Radiated Emission	EN55032: 2012+AC:2013 EN 61000-6-3: 2007/A1:2011	PASS
Harmonics	EN 61000-3-2: 2014	PASS
Voltage Fluctuations	EN 61000-3-3: 2013	PASS

IMMUNITY (EN 55024 : 2010)		
Test Item	Test Spec	Test Result
Electrostatic Discharge Immunity Test (ESD)	±4 kV (contact discharge, HCP/VCP) ±8 kV (Air discharge)	PASS
Radio Frequency electromagnetic field immunity test (RS)	80-1000 MHz, 3V/m, 80%AM(1KHz)	PASS
Electrical Fast Transient/ Burst Immunity Test (EFT)	AC Port: ±1kV, Signal Port: ±0.5 kV	PASS
Surge Immunity Test	AC Power Ports: Line to Line: ±1 kV Line to earth: ±2 kV Signal and telecommunication port: ±1 kV	PASS
Conduction Disturbances induced by Radio-Frequency Fields	0.15-80MHz, 3V, 80%AM(1KHz)	PASS
Power Frequency Magnetic Field Immunity Test	50Hz, 1A/m	PASS
Voltage Dips and Voltage Interruptions Immunity Test	Voltage dips: >95% Reduction, 0.5 Durations (Cycle)	PASS
	30% Reduction, 25 Durations (Cycle)	PASS
	Voltage interruptions: >95% Reduction, 250 Durations (Cycle)	PASS

### IMMUNITY (EN 50130-4: 2011)

Test Item	Test Spec	Test Result
Electrostatic Discharge Immunity Test (ESD)	±6 kV (contact discharge ,HCP/VCP) ±8 kV (Air discharge)	PASS
Radio Frequency electromagnetic field immunity test (RS)	80-2700 MHz, 10V/m, 80%AM(1KHz)	PASS
Electrical Fast Transient/ Burst Immunity Test (EFT)	AC Port: ±2.0kV, Signal Port: ±1.0 kV	PASS
Surge Immunity Test	AC Power Ports: line to line: ±0.5, ±1 kV line to earth: ±0.5, ±1, ±2kV Signal Port: ±0.5, ±1 kV	PASS
Conduction Disturbances induced by Radio-Frequency Fields	0.15-100MHz, 10V, 80%AM(1KHz)	PASS
Voltage Dips and Voltage Interruptions Immunity Test	Voltage Interruptions: 100% Reduction, 250 Cycle	PASS
	Voltage Dips: 60% Reduction, 10 Cycle 30% Reduction, 25 Cycle 20% Reduction, 250 Cycle	PASS

## History of this test report

ORIGINAL.

■ Additional attachment as following record:

### 3. Immunity Testing Performance Criteria Definition

- A. Normal performance within limits specified by the manufacture, requestor or purchaser;
- B. Temporary loss of function or degradation of performance which ceases after the disturbance ceases, and from which the equipment under test recovers its normal performance, without operator intervention;
- C. Temporary loss of function or degradation of performance, the correction of which requires operation intervention;
- D. Loss of function or degradation of performance which is not recoverable, owing to damage to hardware or software, or loss of data.

## 4. Test Configuration of Equipment under Test

### 4.1. Manufacturer

Zhejiang Dahua Vision Technology Co., Ltd.  
No.1199, Bin'an road, Binjiang District, Hangzhou, P.R. China.

### 4.2. Feature of Equipment under Test

First edition:

6 INCH IR SPEED DOME	Model No.:	DH-SD6Cxyzuv-Hab, SD6Cxyzuv-Hab, DH-SD64xyzuv-Hab, SD64xyzuv-Hab (X=1-9 or blank; y=0-9; z=0-9; u=A-Z or blank; v=N,P or blank; a= C,N,S or blank;b=I or blank )
Remark	1) <b>DH-SD6C120S-HN</b> was selected as the test model and its data have been recorded in this report. 2) The differences of the models are different sale regions.	
Adapter	Model No.:	HKA-A24300-230
	Input :	230V~ 50Hz 375mA
	Output :	24.0V 3000mA 72VA

Original:

1.3M FULL HD NETWORK SPEED DOME	Model No.:	DH-SD6C120S-HN, SD6C120S-HN, DH-SD6C120SN-HN, SD63120SN-HN
Remark	<b>DH-SD6C120S-HN</b> was selected as the test model and its data have been recorded in this report.	
Adapter	Model No.:	HKA-A24300-230
	Input :	230V~ 50Hz 375mA
	Output :	24.0V 3000mA 72VA

Models' Differences:

Model No	DH-SD6C120S-HN, SD6C120S-HN, DH-SD6C120SN-HN, SD63120SN-HN
Differences	The difference between neutral and dahua is only the log's difference; The difference between with "N" and without "N" is equipment program's difference.

#### 4.3. Test Software and Test Mode

##### Test Software

- a During testing, the interface cables and equipment positions were varied according to Europe Standard.
- b Turn on the power of all equipment.
- c The complete test system included the Notebook PC, Monitor and EUT for EMI & EMS test.

##### The pre-test modes

Test Mode 1: Normal Operation

Select the worst case of the pre-test modes as the final test mode

Test Mode 1: Normal Operation

#### 4.4. Description of Support Unit

No.	Device	Manufacturer	Model No.	Description
1	Monitor	PINEER-TIMES	PNT-14A	N/A
2	Notebook PC	SONY	PCG-71811P	N/A

Item	Cable	Quantity	Description
A	BNC Cable	1	Shielded, 3.0M
B	LAN Cable	1	Non-Shielded,>3.0m
C	Audio Cable	1	Non-Shielded, 1.8m

#### 4.5. Measurement Uncertainty

Conducted Emission		
The measurement uncertainty is evaluated as $\pm 2.71$ dB.□		
Radiated Emission		
(30MHz -1000MHz)	Horizontal	The measurement uncertainty is evaluated as $\pm 3.59$ dB.□
	Vertical	The measurement uncertainty is evaluated as $\pm 3.89$ dB
(1G-6GHz)	Horizontal	The measurement uncertainty is evaluated as $\pm 2.31$ dB.□
	Vertical	The measurement uncertainty is evaluated as $\pm 2.15$ dB.□

## 5. Test of Conducted Emission

### 5.1. Test Limit

Conducted Emissions were measured from 150 kHz to 30 MHz with a bandwidth of 9 kHz and return leads of the EUT according to the methods defined in European Standard EN 55032.

**Table A.8 – Requirements for conducted emissions from the AC mains power ports of Class A equipment**

Applicable to				
1. AC mains power ports (3.1.1)				
Table clause	Frequency range MHz	Coupling device (see Table A.7)	Detector type / bandwidth	Class A limits dB(µV)
A8.1	0,15 – 0,5	AMN	Quasi Peak / 9 kHz	79
	0,5 – 30			73
A8.2	0,15 – 0,5	AMN	Average / 9 kHz	66
	0,5 – 30			60

NOTE Apply A8.1 and A8.2 across the entire frequency range.

**Table A.9 – Requirements for conducted emissions from the AC mains power ports of Class B equipment**

Applicable to				
1. AC mains power ports (3.1.1)				
Table clause	Frequency range MHz	Coupling device (see Table A.7)	Detector type / bandwidth	Class B limits dB(µV)
A9.1	0,15 – 0,5	AMN	Quasi Peak / 9 kHz	66 – 56
	0,5 – 5			56
	5 – 30			60
A9.2	0,15 – 0,5	AMN	Average / 9 kHz	56 – 46
	0,5 – 5			46
	5 – 30			50

NOTE Apply A9.1 and A9.2 across the entire frequency range.

**Table A.10 – Requirements for asymmetric mode conducted emissions from Class A equipment**

<b>Applicable to</b>						
<b>Table clause</b>	<b>Frequency range MHz</b>	<b>Coupling device (see Table A.7)</b>	<b>Detector type / bandwidth</b>	<b>Class A voltage limits dB(µV)</b>	<b>Class A current limits dB(µA)</b>	
A10.1	0,15 – 0,5	AAN	Quasi Peak / 9 kHz	97 – 87	n/a	
	0,5 – 30			87		
	0,15 – 0,5	AAN	Average / 9 kHz	84 – 74		
	0,5 – 30			74		
A10.2	0,15 – 0,5	CVP and current probe	Quasi Peak / 9 kHz	97 – 87	53 – 43	
	0,5 – 30			87	43	
	0,15 – 0,5	CVP and current probe	Average / 9 kHz	84 – 74	40 – 30	
	0,5 – 30			74	30	
A10.3	0,15 – 0,5	Current Probe	Quasi Peak / 9 kHz	n/a	53 – 43	
	0,5 – 30				43	
	0,15 – 0,5	Current Probe	Average / 9 kHz		40 – 30	
	0,5 – 30				30	

NOTE 1 The choice of coupling device and measurement procedure is defined in Annex C.

NOTE 2 AC mains power ports shall meet the limits given in Table A.8.

NOTE 3 The test shall cover the entire frequency range.

NOTE 4 The application of the voltage and/or current limits is dependent on the measurement procedure used. Refer to Table C.1 for applicability.

NOTE 5 Testing is required at only one EUT supply voltage and frequency.

NOTE 6 Applicable to ports listed above and intended to connect to cables longer than 3 m.

**Table A.11 – Requirements for asymmetric mode conducted emissions from Class B equipment**

<b>Applicable to</b>						
<b>Table clause</b>	<b>Frequency range MHz</b>	<b>Coupling device (see Table A.7)</b>	<b>Detector type / bandwidth</b>	<b>Class B voltage limits dB(µV)</b>	<b>Class B current limits dB(µA)</b>	
A11.1	0,15 – 0,5	AAN	Quasi Peak / 9 kHz	84 – 74	n/a	
	0,5 – 30			74		
	0,15 – 0,5	AAN	Average / 9 kHz	74 – 64		
	0,5 – 30			64		
A11.2	0,15 – 0,5	CVP and current probe	Quasi Peak / 9 kHz	84 – 74	40 – 30	
	0,5 – 30			74	30	
	0,15 – 0,5	CVP and current probe	Average / 9 kHz	74 – 64	30 – 20	
	0,5 – 30			64	20	
A11.3	0,15 – 0,5	Current Probe	Quasi Peak / 9 kHz	n/a	40 – 30	
	0,5 – 30				30	
	0,15 – 0,5	Current Probe	Average / 9 kHz		30 – 20	
	0,5 – 30				20	

NOTE 1 The choice of coupling device and measurement procedure is defined in Annex C.

NOTE 2 Screened ports including TV broadcast receiver tuner ports are tested with a common-mode impedance of 150 Ω. This is typically accomplished with the screen terminated by 150 Ω to earth.

NOTE 3 AC mains power ports shall meet the limits given in Table A.9.

NOTE 4 The test shall cover the entire frequency range.

NOTE 5 The application of the voltage and/or current limits is dependent on the measurement procedure used. Refer to Table C.1 for applicability.

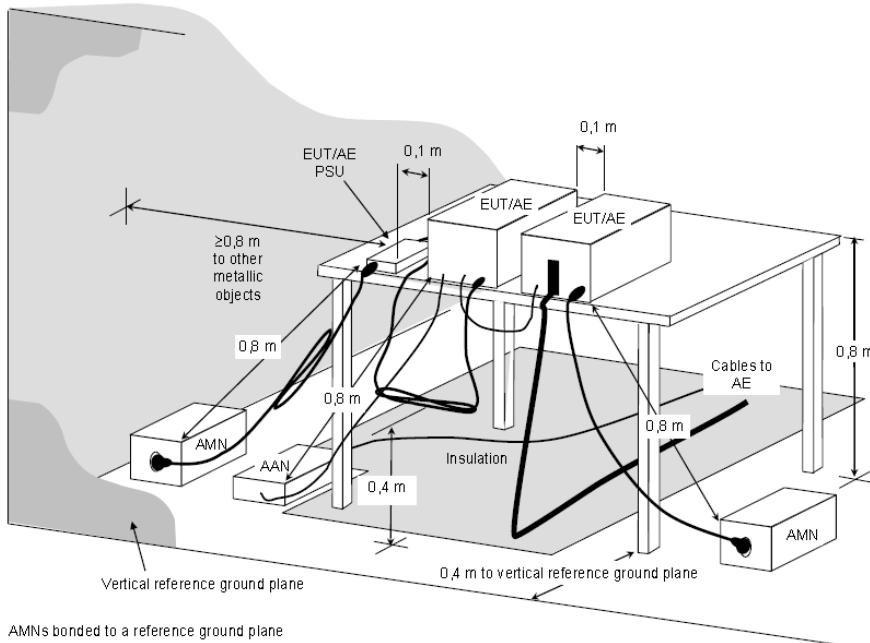

NOTE 6 Testing is required at only one EUT supply voltage and frequency.

NOTE 7 Applicable to ports listed above and intended to connect to cables longer than 3 m.

## 5.2. Test Procedures

- a. The EUT was placed on a desk 0.8 meters height from the metal ground plane and 0.4 meter from the conducting wall of the shielding room and it was kept at least 0.8 meters from any other grounded conducting surface.
- b. Connect EUT to the power mains through a Artificial Mains Network (AMN).
- c. All the support units are connecting to the other AMN.
- d. The AMN provides 50 ohm coupling impedance for the measuring instrument.
- e. The CISPR states that a 50 ohm, 50 micro-Henry AMN should be used.
- f. Both sides of AC line were checked for maximum conducted interference.
- g. The frequency range from 150 kHz to 30 MHz was searched
- h. Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

## 5.3. Typical Test Setup

**NOTE** The 0,8 m distance specified between EUT/AE/PSU and AMN/AAN, is applicable only to the EUT being measured. If the device is AE then it shall be ≥0,8 m.

**Figure D.2 – Example measurement arrangement for table-top EUT  
(Conducted emission measurement – alternative 1)**

## 6. Test of Radiated Emission

### 6.1. Test Limit

The EUT shall meet the limits of below Table when measured at the measuring distance R in accordance with the methods described in European Standard EN 55032. If the reading on the measuring receiver shows fluctuations close to the limit, the reading shall be observed for at least 15 s at each measurement frequency; the highest reading shall be recorded, with the exception of any brief isolated high reading, which shall be ignored.

**Table 1 – Required highest frequency for radiated measurement**

Highest internal frequency ( $F_x$ )	Highest measured frequency
$F_x \leq 108 \text{ MHz}$	1 GHz
$108 \text{ MHz} < F_x \leq 500 \text{ MHz}$	2 GHz
$500 \text{ MHz} < F_x \leq 1 \text{ GHz}$	5 GHz
$F_x > 1 \text{ GHz}$	$5 \times F_x$ up to a maximum of 6 GHz

NOTE 1 For FM and TV broadcast receivers,  $F_x$  is determined from the highest frequency generated or used excluding the local oscillator and tuned frequencies.

NOTE 2  $F_x$  is defined in 3.1.19.

Where the  $F_x$  is unknown, the radiated emission measurements shall be performed up to 6 GHz.

**Table A.2 – Requirements for radiated emissions at frequencies up to 1 GHz for Class A equipment**

Table clause	Frequency range MHz	Measurement		Class A limits dB( $\mu\text{V}/\text{m}$ )
		Distance m	Detector type/ bandwidth	OATS/SAC (see Table A.1)
A2.1	30 – 230	10	Quasi Peak / 120 kHz	40
	230 – 1 000			47
A2.2	30 – 230	3	Average / 1 MHz	50
	230 – 1 000			57

NOTE Apply only A2.1 or A2.2 across the entire frequency range.

**Table A.3 – Requirements for radiated emissions at frequencies above 1 GHz for Class A equipment**

Table clause	Frequency range MHz	Measurement		Class A limits dB( $\mu\text{V}/\text{m}$ )
		Distance m	Detector type/ bandwidth	FSOATS (see Table A.1)
A3.1	1 000 – 3 000	3	Average / 1 MHz	56
	3 000 – 6 000			60
A3.2	1 000 – 3 000		Peak / 1 MHz	76
	3 000 – 6 000			80

NOTE Apply A3.1 and A3.2 across the frequency range from 1 000 MHz to the highest required frequency of measurement derived from Table 1.

**Table A.4 – Requirements for radiated emissions at frequencies up to 1 GHz  
for Class B equipment**

Table clause	Frequency range MHz	Measurement		Class B limits dB(µV/m)
		Distance m	Detector type/ bandwidth	OATS/SAC (see Table A.1)
A4.1	30 – 230	10	Quasi Peak / 120 kHz	30
	230 – 1 000			37
A4.2	30 – 230	3	Quasi Peak / 120 kHz	40
	230 – 1 000			47

NOTE Apply only table clause A4.1 or A4.2 across the entire frequency range.

**Table A.5 – Requirements for radiated emissions at frequencies above 1 GHz  
for Class B equipment**

Table clause	Frequency range MHz	Measurement		Class B limits dB(µV/m)
		Distance m	Detector type/ bandwidth	FSOATS (see Table A.1)
A5.1	1 000 – 3 000	3	Average/ 1 MHz	50
	3 000 – 6 000			54
A5.2	1 000 – 3 000	3	Peak/ 1 MHz	70
	3 000 – 6 000			74

NOTE Apply A5.1 and A5.2 across the frequency range from 1 000 MHz to the highest required frequency of measurement derived from Table 1.

**Table A.6 – Requirements for radiated emissions from FM receivers**

Table clause	Frequency range MHz	Measurement		Class B limit dB(µV/m)	
		Distance m	Detector type/ bandwidth	Fundamental	Harmonics
				OATS/SAC (see Table A.1)	OATS/SAC (see Table A.1)
A6.1	30 – 230	10	Quasi peak/ 120 kHz	50	42
	230 – 300				42
	300 – 1 000			60	46
A6.2	30 – 230	3	Quasi peak/ 120 kHz	52	52
	230 – 300				52
	300 – 1 000			60	56

NOTE 1 Apply only A.6.1 or A.6.2 across the entire frequency range.

NOTE 2 These relaxed limits apply only to emissions at the fundamental and harmonic frequencies of the local oscillator. Signals at all other frequencies shall be compliant with the limits given in Table A.4.

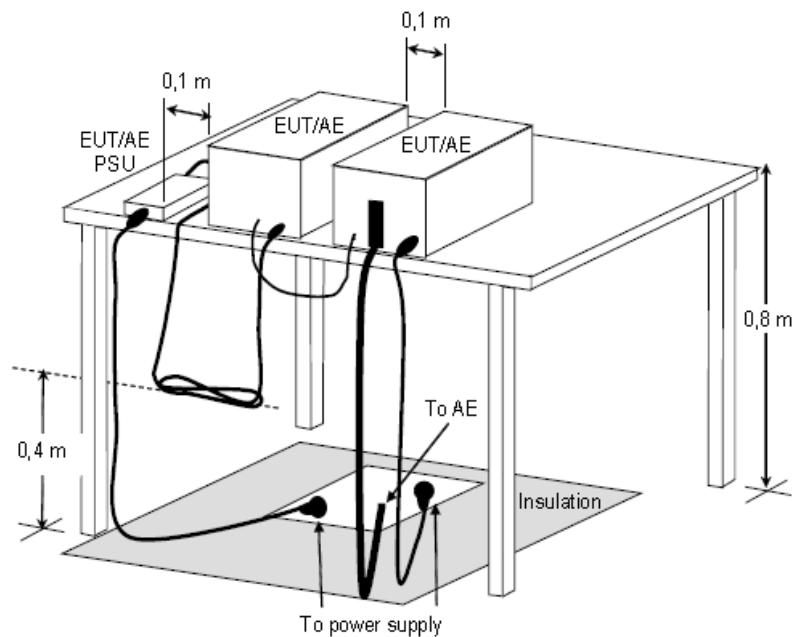

**Table A.12 – Requirements for conducted differential voltage emissions from Class B equipment**

Table clause	Frequency range MHz	Detector type/ bandwidth	Class B limits dB(µV) 75 Ω			Applicability		
			Other	Local Oscillator Fundamental	Local Oscillator Harmonics			
A12.1	30 – 950	For frequencies ≤1 GHz Quasi Peak/ 120 kHz	46	46	46	See NOTE 1		
	950 – 2 150		46	54	54			
A12.2	950 – 2 150		46	54	54	See NOTE 2		
A12.3	30 – 300	For frequencies ≥1 GHz	46	54	50	See NOTE 3		
	300 – 1 000				52			
A12.4	30 – 300	Peak/ 1 MHz	46	66	59	See NOTE 4		
	300 – 1 000				52			
A12.5	30 – 950	Peak/ 1 MHz	46	76	46	See NOTE 5		
	950 – 2 150			n/a	54			
NOTE 1 Television receivers (analogue or digital), video recorders and PC TV broadcast receiver tuner cards working in channels between 30 MHz and 1 GHz, and digital audio receivers.								
NOTE 2 Tuner units (not the LNB) for satellite signal reception.								
NOTE 3 Frequency modulation audio receivers and PC tuner cards.								
NOTE 4 Frequency modulation car radios.								
NOTE 5 Applicable to EUTs with RF modulator output ports (for example DVD equipment, video recorders, camcorders and decoders etc.) designed to connect to TV broadcast receiver tuner ports.								
NOTE 6 Testing is required at only one EUT supply voltage and frequency.								
NOTE 7 The term 'other' refers to all emissions other than the fundamental and the harmonics of the local oscillator.								
NOTE 8 The test shall be performed with the device operating at each reception channel.								
NOTE 9 The test shall cover the entire frequency range.								

## 6.2. Test Procedures

- a. The EUT was placed on a relatable table top 0.8 meter above ground.
- b. The EUT was set 10 meters from the interference receiving antenna which was mounted on the top of a variable height antenna tower.
- c. The table was rotated 360 degrees to determine the position of the highest radiation.
- d. The antenna is a half wave dipole and its height is varied between one meter and four meters above ground to find the maximum value of the field strength both horizontal polarization and vertical polarization of the antenna are set to make the measurement.
- e. For each suspected emission the EUT was arranged to its worst case and then tune the antenna tower (from 1 M to 4 M) and turn table (from 0 degree to 360 degrees) to find the maximum reading.
- f. Set the test-receiver system to Peak Detect Function and specified bandwidth with Maximum Hold Mode.

## 6.3. Typical test Setup

**Figure D.8 – Example measurement arrangement for table-top EUT (Radiated emission measurement)**

## 8. Voltage Fluctuations Test

### 8.1. Test Procedure

The equipment shall be tested under the conditions of **Clause 5**.

The total impedance of the test circuit, excluding the appliance under test, but including the internal impedance of the supply source, shall be equal to the reference impedance. The stability and tolerance of the reference impedance shall be adequate to ensure that the overall accuracy of  $\pm 8\%$  is achieved during the whole assessment procedure.

## 9. Electrostatic Discharge Immunity Test

### 9.1. Test Procedure

- a. In the case of air discharge testing the climatic conditions shall be within the following ranges:
  - ambient temperature: 15°C to 35°C;
  - relative humidity : 30% to 60%;
  - atmospheric pressure : 86 KPa (860 hPa) to 106 KPa (1060 hPa).
- b. Test programs and software shall be chosen so as to exercise all normal modes of operation of the EUT. The use of special exercising software is encouraged, but permitted only where it can be shown that the EUT is being comprehensively exercised.
- c. The test voltage shall be increased from the minimum to the selected test severity level, in order to determine any threshold of failure. The final severity level should not exceed the product specification value in order to avoid damage to the equipment.
- d. The test shall be performed with both air discharge and contact discharge. On reselected points at least 10 single discharges (in the most sensitive polarity) shall be applied on air discharge. On reselected points at least 25 single discharges (in the most sensitive polarity) shall be applied on contact discharge.
- e. For the time interval between successive single discharges an initial value of one second is recommended. Longer intervals may be necessary to determine whether a system failure has occurred.
- f. In the case of contact discharges, the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.
- g. In the case of painted surface covering a conducting substrate, the following procedure shall be adopted :
  - ❖ If the coating is not declared to be an insulating coating by the equipment manufacturer, then the pointed tip of the generator shall penetrate the coating so as to make contact with the conducting substrate.
  - ❖ Coating declared as insulating by the manufacturer shall only be submitted to the air discharge.
  - ❖ The contact discharge test shall not be applied to such surfaces.
- h. In the case of air discharges, the round discharge tip of the discharge electrode shall be approached as fast as possible (without causing mechanical damage) to touch the EUT . After each discharge, the ESD generator (discharge electrode) shall be removed from the EUT. The generator is then retriggered for a new single discharge. This procedure shall be repeated until the discharges are completed. In the case of an air discharge test, the discharge switch, which is used for contact discharge, shall be closed.

## 9.2. Test Setup for Tests Performed in Laboratory

The test setup consists of the test generator, EUT and auxiliary instrumentation necessary to perform DIRECT and INDIRECT application of discharges to the EUT as applicable, in the follow manner :

- Contact Discharge to the conductive surfaces and to coupling plane;
- Air Discharge at insulating surfaces.

The preferred test method is that of type tests performed in laboratories and the only accepted method of demonstrating conformance with this standard. The EUT was arranged as closely as possible to arrangement in final installed conditions.

A ground reference plane was provided on the floor of the test site. It was a metallic sheet (copper or aluminum) of 0.25 mm, minimum thickness; other metallic may be used but they shall have at least 0.65 mm thickness. In the Exclusive Certification Corp., we provided 1 mm thickness stainless steel ground reference plane. The minimum size of the ground reference plane is 2.5 m x 2.5 m, the exact size depending on the dimensions of the EUT. It was connected to the protective grounding system.

The EUT was arranged and connected according to its functional requirements. A distance of 1m minimum was provided between the EUT and the wall of the lab. and any other metallic structure. In cases where this length exceeds the length necessary to apply the discharges to the selected points, the excess length shall, where possible, be placed non-inductively off the ground reference plane and shall not come closer than 0.2m to other conductive parts in the test setup.

Where the EUT is installed on a metal table, the table was connected to the reference plane via a cable with a 470k ohm resister located at each end, to prevent a build-up of charge. The test setup was consist a wooden table, 0.8m high, standing on the ground reference plane. A HCP, 1.6 m x 0.8 m, was placed on the table. The EUT and cables was isolated from the HCP by an insulating support 0.5 mm thick. The VCP size, 0.5 m x 0.5 m.

### 9.3. Test Severity Levels

Contact Discharge		Air Discharge	
Level	Test Voltage (KV) of Contact discharge	Level	Test Voltage (KV) of Air Discharge
1	±2	1	±2
2	±4	2	±4
3	±6	3	±8
4	±8	4	±15
X	Specified	X	Specified

Remark: "X" is an open level.

## 10. Radio Frequency electromagnetic field immunity test

### 10.1. Test Procedure

- i. The equipment to be tested is placed in the center of the enclosure on a wooden table. The equipment is then connected to power and signal leads according to pertinent installation instructions.
- j. The required field strength is determined by placing the field strength meter(s) on top of or directly alongside the equipment under test and monitoring the field strength meter via a remote field strength indicator outside the enclosure while adjusting the continuous-wave to the applicable antennae.
- k. The test is normally performed with the antenna facing the most sensitive side of the EUT. The polarization of the field generated by the bucolical antenna necessitates testing each position twice, once with the antenna positioned vertically and again with the antenna positioned horizontally. The circular polarization of the field from the log-spiral antenna makes a change of position of the antenna unnecessary.
- l. At each of the above conditions, the frequency range is swept 80-2700 MHz, pausing to adjust the R.F. signal level or to switch oscillators and antenna. The rate of sweep is in the order of  $1.5 \times 10^{-3}$  decades/s. The sensitive frequencies or frequencies of dominant interest may be discretely analyzed.

### 10.2. Test Severity Levels

	Condition of Test	Remarks
1.	Field Strength	10 V/m
2.	Radiated Signal	AM 80% Modulated with 1kHz Pulse modulation 1Hz (0.5s ON; 0.5s OFF)
3.	Scanning Frequency	80MHz - 2700MHz
4	Dwell Time	3 Seconds
5.	Frequency step size $\Delta f$ :	1%
6.	The rate of Swept of Frequency	$1.5 \times 10^{-3}$ decades/s

## 11. Electrical Fast Transient/ Burst Immunity Test

### 11.1. Test Procedure

- a. In order to minimize the effect of environmental parameters on test results, the climatic conditions when test is carrying out shall comply with the following requirements:
  - ❖ ambient temperature: 15°C to 35°C;
  - ❖ relative humidity : 45% to 75%;
  - ❖ Atmospheric pressure: 86 Kpa (860 hPa) to 106 Kpa (1060 hPa).
- b. In order to minimize the effect of environmental parameters on test results, the electromagnetic environment of the laboratory shall not influence the test results.
- c. The variety and diversity of equipment and systems to be tested make it difficult to establish general criteria for the evaluation of the effects of fast transients/bursts on equipment and systems.
- d. Test on Power Line:
  - ❖ The EFT/B-generator was located on the GRP.. The length from the EFT/B-generator to the EUT is not exceeding 1 m.
  - ❖ The EFT/B-generator provides the ability to apply the test voltage in a non-symmetrical condition to the power supply input terminals of the EUT.
- e. Test on Communication Lines
  - ❖ The coupling clamp is composed of a clamp unit for housing the cable (length more than 3 m), and was placed on the GRP.
  - ❖ The coupling clamp provides the ability of coupling the fast transient/bursts to the cable under test.
- f. The test results may be classified on the basic of the operating conditions and the functional specification of the equipment under test, according to the following performance criteria :
  - ❖ Normal performance within the specification limits.
  - ❖ Temporary degradation or loss of function or performance which is self-recoverable.
  - ❖ Temporary degradation or loss of function or performance which requires operator intervention or system reset.
  - ❖ Degradation or loss of function which is not recoverable due to damage of equipment (components).

## 11.2. Test Severity Levels

The following test severity levels are recommended for the fast transient/burst test :

Open circuit output test voltage $\pm 10\%$		
Level	On Power Supply	On I/O signal, data and control line
1	0.5 KV	0.25 KV
2	1.0 KV	0.50 KV
3	2.0 KV	1.00 KV
4	4.0 KV	2.00 KV
X	Specified	Specified

Remark : " X " is an open level. The level is subject to negotiation between the user and the manufacturer or is specified by the manufacturer.

## 11.3. Measurement equipment

## 12. Surge Immunity Test

### 12.1. Test Procedure

#### a. Climatic conditions

The climatic conditions shall comply with the following requirements :

- ✧ ambient temperature : 15 °C to 35 °C
- ✧ relative humidity : 10 % to 75 %
- ✧ atmospheric pressure : 86 kPa to 106 kPa ( 860 hPa to 1060 hPa )

#### b. Electromagnetic conditions

the electromagnetic environment of the laboratory shall not influence the test results.

#### c. The test shall be performed according the test plan that shall specify the test set-up with

- ✧ generator and other equipment utilized;
- ✧ test level ( voltage/current );
- ✧ generator source impedance;
- ✧ internal or external generator trigger;
- ✧ number of tests : at least five positive and five negative at the selected points;
- ✧ repetition rate : maximum 1/min.
- ✧ inputs and outputs to be tested;
- ✧ representative operating conditions of the EUT;
- ✧ sequence of application of the surge to the circuit;
- ✧ phase angle in the case of AC. power supply;
- ✧ actual installation conditions, for example :
  - AC : neutral earthed,
  - DC : ( + ) or ( - ) earthed to simulated the actual earthing conditions.

- d. If not otherwise specified the surges have to be applied synchronized to the voltage phase at the zero-crossing and the peak value of the AC. voltage wave ( positive and negative ).
- e. The surges have to be applied line to line and line(s) and earth. When testing line to earth, the test voltage has to be applied successively between each of the lines and earth, if there is no other specification.
- f. The test procedure shall also consider the non-linear current-voltage characteristics of the equipment under test. Therefore the test voltage has to be increased by steps up to the test level specified in the product standard or test plan.
- g. All lower levels including the selected test level shall be satisfied. For testing the secondary protection, the output voltage of the generator shall be increased up to the worst-case voltage breakdown level ( let-through level ) of the primary protection.
- h. If the actual operating signal sources are not available, that may be simulated. Under no circumstances may the test level exceed the product specification. The test shall be carried out according to a test plan.
- i. To find all critical points of the duty cycle of the equipment, a sufficient number of positive and negative test pulses shall be applied. For acceptance test previously unstressed equipment shall be used to the protection devices shall be replaced.

## 12.2. Test Severity Level

Level	Open-circuit test voltage, $\pm 10\%$ , KV
1	0.5
2	1.0
3	2.0
4	4.0
X	Specified

NOTE: "X" is an open class. This level can be specified in the product specification.

## 13. Conduction Disturbances induced by Radio-Frequency Fields

### 13.1. Test Procedure

- a. The EUT shall be operated within its intended climatic conditions. The temperature and relative humidity should be recorded.
- b. This test method test can be performed without using a sell shielded enclosure. This is because the disturbance levels applied and the geometry of the setups are not likely to radiated a high amount of energy, especially at the lower frequencies. If under certain circumstances the radiated energy is too high, a shielded enclosure has to be used.
- c. The test shall be performed with the test generator connected to each of the coupling and decoupling devices in turn while the other non-excited RF-input ports of the coupling devices are terminated by a 50 ohm load resistor.
- d. The frequency range is swept from 150 KHz to 100 MHz, using the signal levels established during the setting process, and with the disturbance signal 80% amplitude modulated with a 1KHz sign wave, pausing to adjust the RF-signal level or to switch coupling devices as necessary. The rate of sweep shall no exceed  $1.5 \times 10^{-3}$  decades/s. Where the frequency is swept incrementally, the step size shall no exceed 1% of the start and thereafter 1% of the preceding frequency value.
- e. The dwell time at each frequency shall not be less than the time necessary for the EUT to be exercised, and able to respond. Sensitive frequencies e.g. clock frequency (ies) and harmonics or frequencies of dominant interest shall be analyzed separately.
- f. An alternative test procedure may be adopted, wherein the frequency range is swept incrementally, with a step size not exceeding 4% of the start ad thereafter 4% of the preceding frequency value. The test level should be at least twice the value of the specified test level.
- g. In cases of dispute, the test procedure using a step size not exceeding 1% of the start and thereafter 1% of preceding frequency value shall take precedence.
- h. Attempts should be made to fully exercise the EUT during testing, and to fully interrogate all exercise modes selected for susceptibility.
- i. The use of special exercising programs is recommended.
- j. Testing shall be performed according to a Test Plan, which shall be included in the test report.
- k. It may be necessary to carry out some investigatory testing in order to establish some aspects of the test plan.

### 13.2. Test Severity Levels

Level	Voltage Level ( EMF ),
1	1 V
2	3 V
3	10 V
